

## Pre-entry of the delivery note

### Analysis of the delivery note

- Automatic comparison with the ordering ERP system (SAP, proALPHA, Navision, FOSS, CANIAS etc.)
- Order number (also multiple orders on one delivery note), ordered quantity versus delivery quantity, delivery note date, delivery note number, supplier, customs tariff number, over and under deliveries
- Barcode, OCR and logo recognition of the delivery notes
- No more pre-sorting of the containers needed
- Direct posting (without image recording) of non-electronic components for mixed deliveries of a supplier
- Creation of an incoming goods number for the later process on the WEControl Dome, resulting in a significantly faster processing of many incoming goods, division of the whole incoming goods process into several workstations (pre-entry of the delivery note, entry of the container)
- Prioritization of the incoming goods (items) according to the importance for the subsequent processes on the WEControl DOME
- Entry of additional documents, such as certificates, customs documents, invoice etc.
